DETACH PRO

# 2 Port Motorised Valve

***Important: Keep this document***

The DS22_P DETACH PRO valve is specifically designed for use in domestic applications only.

It is not designed for use in commercial or industrial applications such as schools, nursing homes or hotels where large commercial pump sets are fitted.

Warranty will be void if a valve is fitted in any application other than domestic.

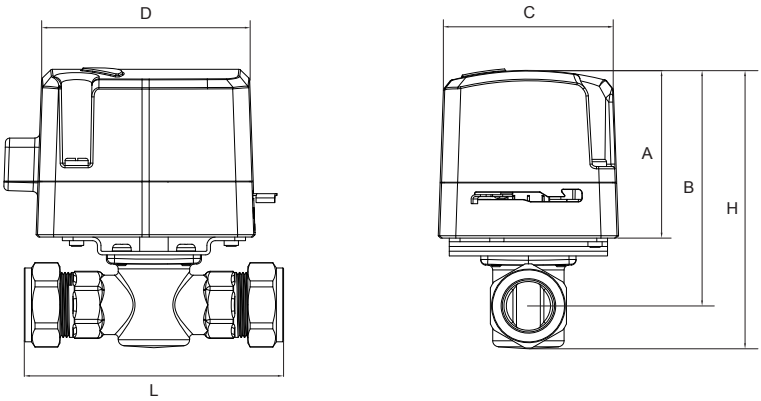
Please note we have a full range of commercial and industrial valves to suit every application.

**CAUTION!** Installation and connection should only be carried out by a qualified person and in accordance with wiring regulations.

- Do not open the products. There are no serviceable or adjustable parts inside. The system must be fused to no more than 3 Amps.
- Isolate mains supply before installation commences.
- Isolate mains supply before attaching cable to actuator.
- Isolate mains supply before detaching cable from actuator.
- If this equipment is installed or used in a way not specified by the manufacturer, its safety may be impaired.

## PRODUCT DRAWING

**Side view**



| VALVE TYPE | L | H | A | B | C | D |
|---|---|---|---|---|---|---|
| 22mm Compression | 109 | 115.5 | 70 | 98 | 76 | 88 |
| 28mm Compression | 114 | 116.5 | 70 | 98 | 76 | 88 |

## 1. Valve positioning

Install the valve so the actuator head is not below the horizontal level of the pipework. The open vent and cold feed must not be isolated.

## 2. Fitting the valve body to the pipework

Fit the valve body using the nuts and olives provided. When tightening the compression nuts ensure that only the valve body is used for grip. Take care not to overtighten. The actuator should not be mounted when fitting the valve.

## 3. Fitting of actuator to the valve body

1) Align the 7mm spindle on the valve body to the identically sized slot on the actuator.
2) Rotate the actuator until the fixing lug on the actuator lines up with the lug hole on the mounting plate.
3) Insert the two fixing screws (provided) through the actuator and tighten onto the mounting plate.

Once the actuator is fitted, place the manual override lever in the raised manual position. It is now possible to flush and drain the system to remove any foreign matter. The system can now be filled and corrosion inhibitor may be added if required.

## 4. Wiring Connections

**4.1 The 1.2 metre cable can be connected as follows:**

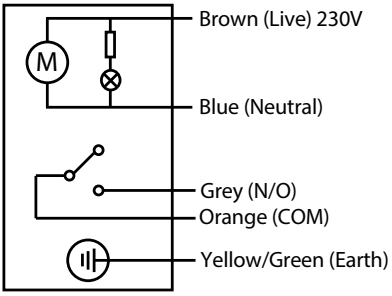
| WIRE COLOUR | DESCRIPTION |
|---|---|
| Brown | 230V live (normally connected via room or cylinder stat) |
| Blue | Neutral supply |
| White | Auxiliary switch N/C (DS228P only) |
| Grey | Auxiliary switch N/O (normally connected to Boiler and Pump) |
| Orange | Auxiliary switch COM (normally connected to 230V) |
| Yellow / Green | Earth connection |

**CAUTION!**

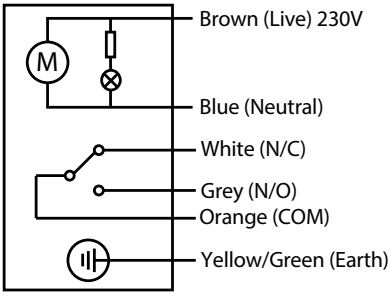
- Ensure that no more than a 3A fuse is used to supply all controls.
- It is not permissible to use any voltage other than 230V with this actuator.
- Electrical installation must conform with current I.E.E. regulations.

**4.2 Diagram:**

**DS222P**



**DS228P**



The auxiliary switch can be used as an interlock facility, thereby ensuring any auxiliary equipment is switched OFF when the valve is in the closed position. When the valve is in the fully open position the auxiliary equipment will be switched ON.*

## 5. Commissioning

Once the system has been filled and vented, carry out the following to ensure correct operation of the valve.

A) Ensure the manual override lever is in the Auto position.

B) Switch on the relevant channel on the programmer.

C) Set the thermostat to maximum.

D) The valve should move to the fully open position.

E) The auxiliary switch should close and thereby switch ON any auxiliary equipment.*

Once satisfied with valve operation. Reset the programmer and thermostat to normal operating conditions.

* Examples of auxiliary equipment include boilers and pumps

**WARNING!**

- Under no circumstances should the actuator be insulated or covered by any other material.
- Lack of ventilation will cause the actuator to heat up beyond the maximum permissible ambient temperature of 50˚C.

# TECHNICAL SPECIFICATION

| MODEL | COMPRESSION | Kvs($m^3/h$) | MAX CLOSE OFF PRESSURE (BAR) |
|---|---|---|---|
| DS222P | 22 mm | 4.6 | 1.0 |
| DS228P | 28 mm | 6.8 | 0.6 |

| ACTUATOR | | VALVE | |
|---|---|---|---|
| Motor supply voltage | 230V | Max. static pressure | 21 Bar |
| Rated impulse voltage | 2500V | Max. operating pressure | 21 Bar |
| Power consumption | 5W | Permanent operating temperature | 2 ... 88˚C |
| Max. ambient temperature | 50˚C | | |
| Protection rating | IP20 | | |
| Auxiliary contact rating | 11(3)A | | |
| Impedance protected motor | | | |

| | |
|---|---|
| **LEAD SUPPLIED** | 1.2 metre cable. Earth Connection required. |
| **ACTUATOR OPERATION** | 230V Power to open - Spring return to close. |
| | This is not a fail safe, a no fail or a safety product. |
| | This control is designated Type 1. AA. in accordance with EN60730. |
| | Type of action is multi position. Type of movement is rotary. |
| **MANUAL OVERRIDE** | Valve may be manually opened for filling or draining the system. |
| | In normal operation, the lever must be in the Auto position |
| | If the mains power is disconnected, the valve will automatically spring return to the closed position. |

## WARNING!

- Under no circumstances should the actuator be insulated or covered by any other material.
- Lack of ventilation will cause the actuator to heat up beyond the maximum permissible ambient temperature of 50˚C.

The crossed out wheelie bin symbol on this product indicates that this product must not be disposed of in your general waste. It can be taken to your Local Authority Civic Amenity site for free or returned to your retailer for free when you are buying a replacement. Inappropriate waste handling could lead to negative effects on the environment and human health. With your cooperation you contribute to the correct disposal, reuse, recycling and recovery of the components of this product and the protection of the environment.
